Chemical Processing (JLAB - P. Kneisel, J. Mammoser et.al.)

- BCP to be performed at the JLAB Facility
- The procedure has been defined (similar to SNS cryomodule):
 - Initial RF testing
 - BCP (200 μm)
 - Baking (600° C)
 - Tuning & Testing (VTA - 2K)
 - Re-BCP (if required)
 - High Pressure Rinsing
 - He Vessel Assembly
- Cryomodule Installation at BNL (~ Dec 2005)

Low Level RF (K. Smith, M. Blaskiewicz et.al.)

- LLRF Design is in progress

- Maximize commonality for RHIC, AGS, Booster, **ERL**, EBIS.

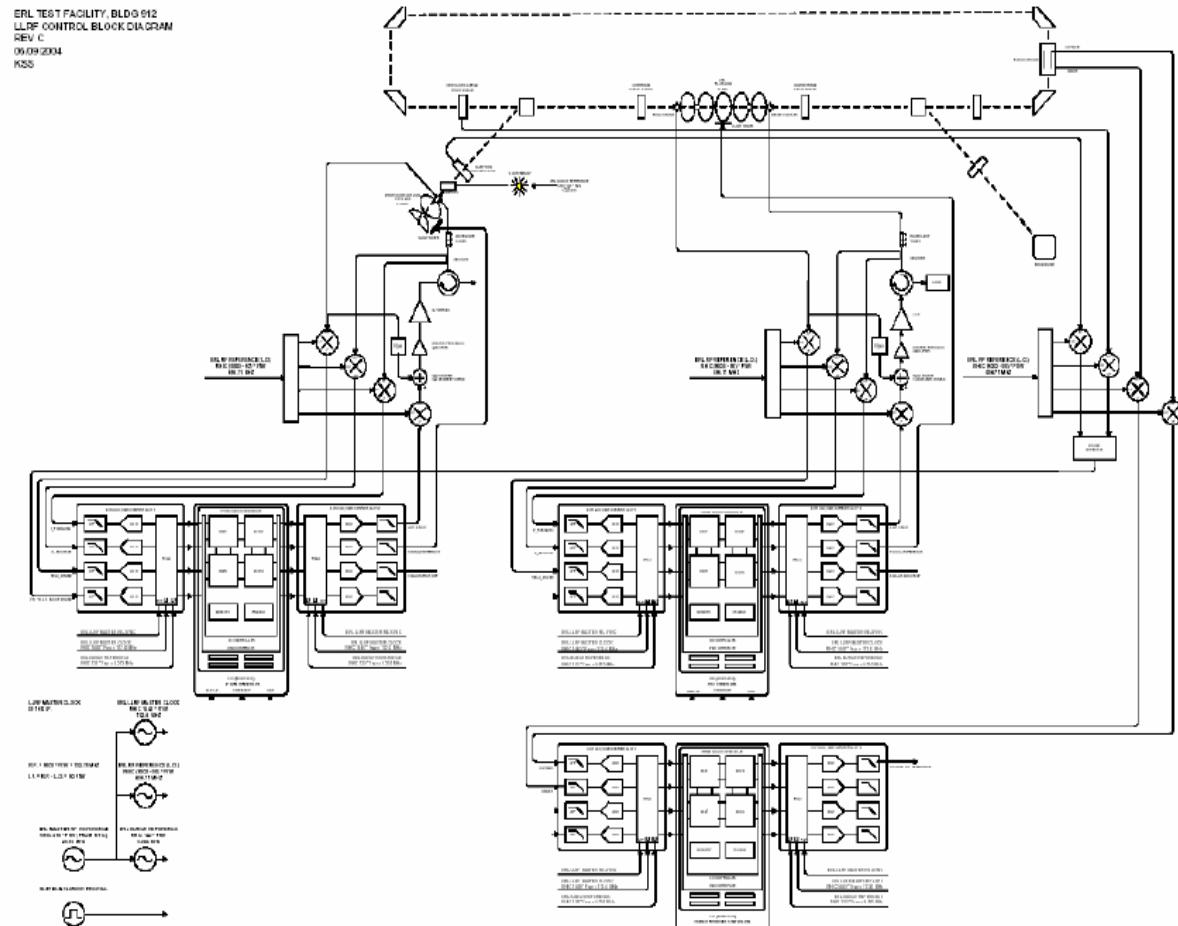

- Digital IQ fast feedback for RF field amplitude and phase control.

- Stability targets for ERL cavity and gun are $< 10^{-4}$ amp. and $< 0.1^{\circ}$ phase.

- Phase locked to RHIC master oscillator.

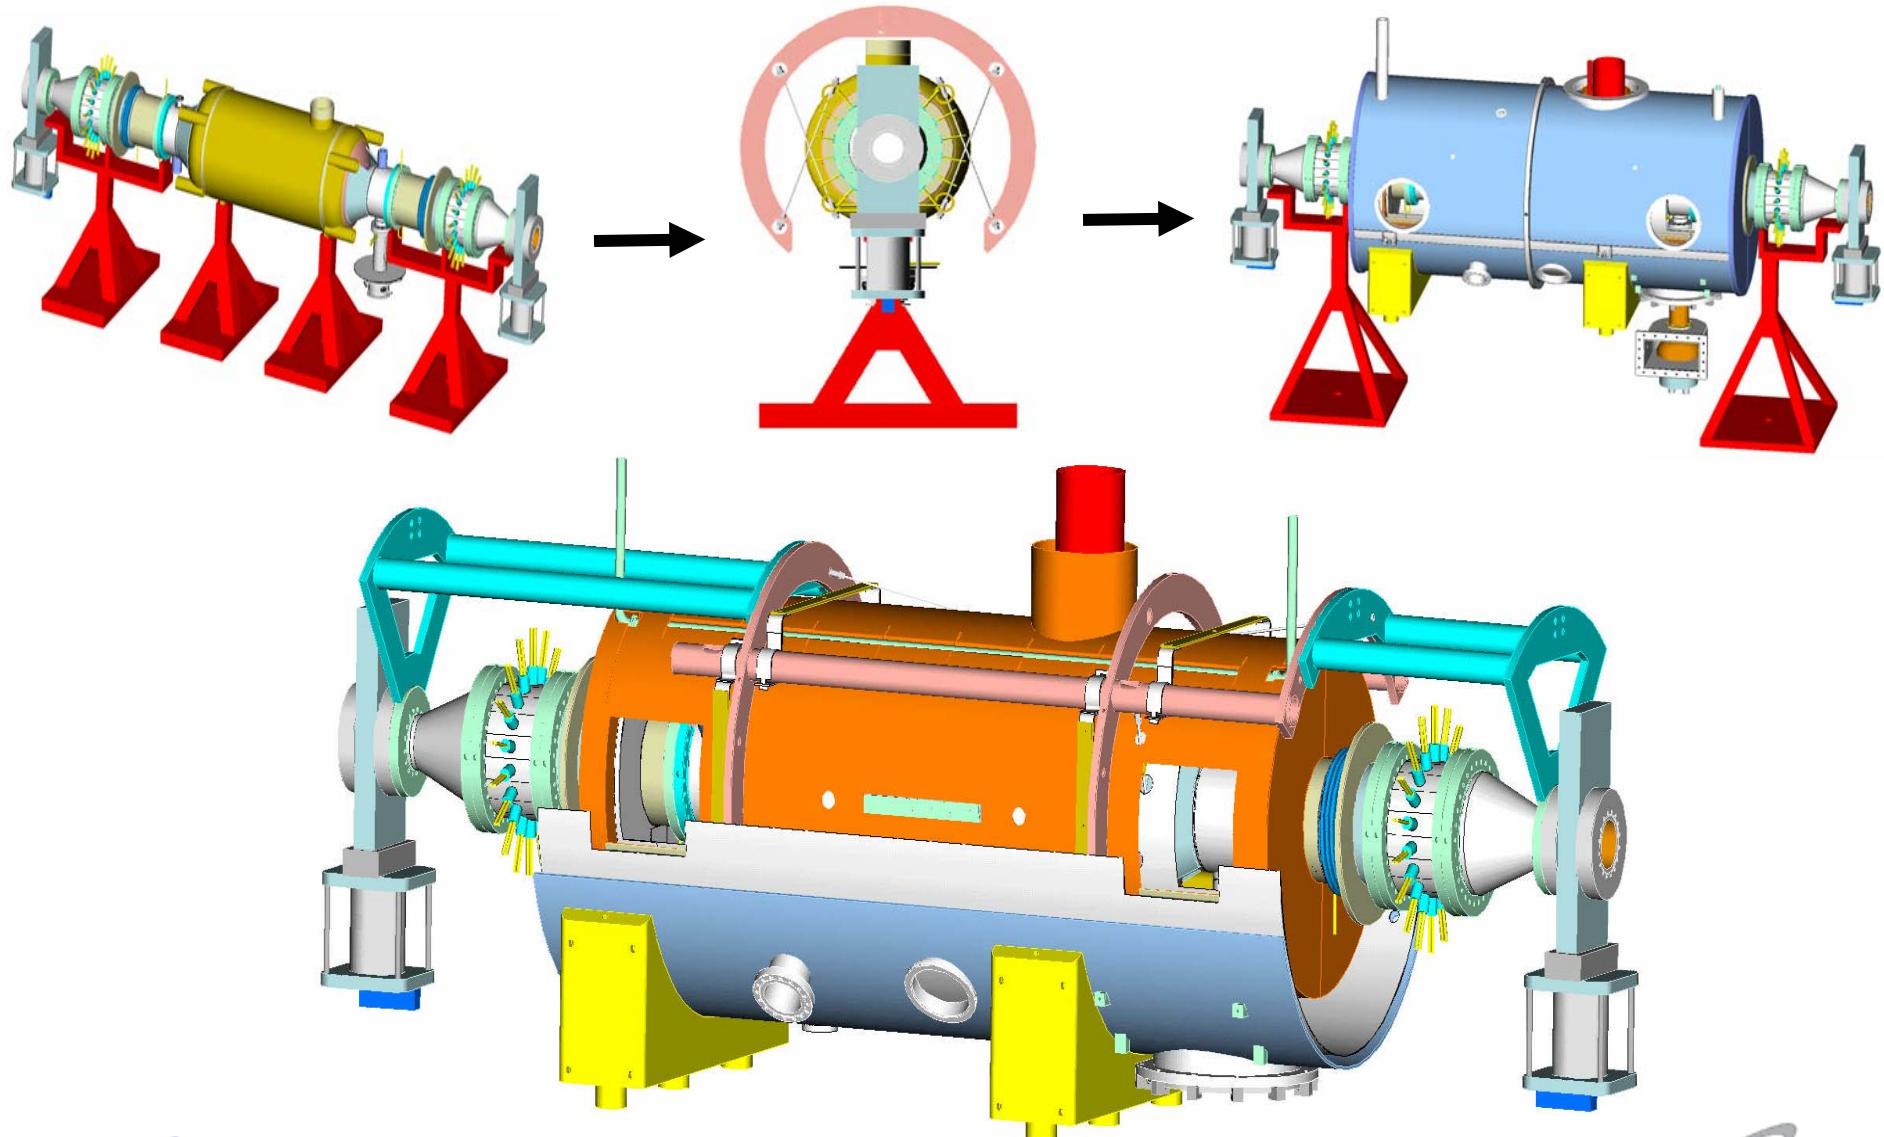

- "Generic" carrier platform, PowerPC based embedded FEC (IOC) running VxWorks.

- XMC daughter sites for daughter modules (DSP & FPGA signal processing, DAC/DDS, ADC, etc.) which implement all control functionality.
