Actual situation, two control systems:

- EPICS@SLS, VME based

- ACS@Cyclotrons, CAMAC and VME based

Decision of Management to standardize hardware and software:

- Replace CAMAC with VME, 5 years, 5M SFr

- Replace Cyclotron control system with EPICS

Realization: Integrate existing features of ACS into EPICS

- Database driven configuration

- Naming conventions

- Device introspection

- ACS⇔EPICS gateway for a smooth transition
